

# Woodwork Room.

This is where designs become reality. Students will see sketches they have prepared be transformed into real 3 dimensional objects. Students will develop skills that will remain with them for the rest of their lives whilst thoroughly enjoying themselves. We have a full range of hand tools and machines set within a modern, spacious and active learning environment. Traditionally Woodwork was perceived as a male student orientated subject. Today, female students frequent the subject almost equal to male students and achieve the same high levels of success and satisfaction.
